

Create exam concept

In *EvaExam*, you have the option of conducting three different types of scanned exams. You can choose between a questionnaire on which the answers are also given (option 1), a questionnaire with a separate answer sheet (option 2), or just the creation of an answer sheet (option 3).

* **Option 1** allows you to include all question types, but has the disadvantage that the scanning process takes longer because more sheets have to be scanned. * **Option 2** allows you to include all question types except open-ended questions, segmented open-ended questions, and Kprim questions. However, this option saves time, as you only need to scan the answer sheets. * If you choose **Option 3**, you only need to create one answer sheet for single-choice questions that have the same number of answer options. This option is less time-consuming to scan than options 1 and 2.
